Let's Start!

Let's learn about types of data validation

✓	_____	*
✓	_____	*
✓	_____	*

Learning Outcome:

Describe common activities at work to a visitor using short sentences in familiar spoken and written situations.
Understand information about data and its structure in simple spoken and written situations.

Ask your partner:

- Why do you think there are some mandatory fields in online forms?
- Why do you think it is important to validate online forms?

Can Do Statements:

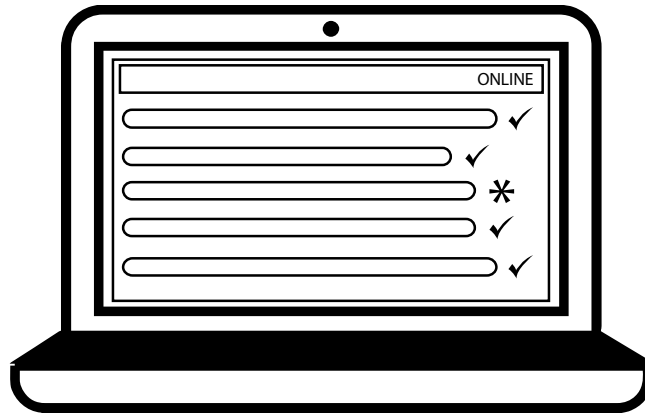

- I can talk about the different types of data validation.
- I can describe the form level validation and field level validation.
- I can explain the concept of data saving validation, search criteria validation, and range validation.

Let's Explore!

Keep an eye on* data validation

*To "keep an eye on something" means to check someone or something carefully or stay informed about what is happening.

Instructions: Read the text below.

Mary: Ok, I think that's it; we are done with the online forms.

Martin: Not yet, in fact, we need to set some data validation rules so that people do not enter the wrong information in the fields.

Mary: I see. What else are you going to do there?

Martin: I'm just going to set 5 simple data validation rules to ensure the information we gather from users is clean. Here, let me show you how they work. This is the form level validation; this process is going to set some fields as mandatory to ensure the users mark all checkboxes correctly; otherwise, they're not going to be able to move forward.

Mary: What's this other validation process for?

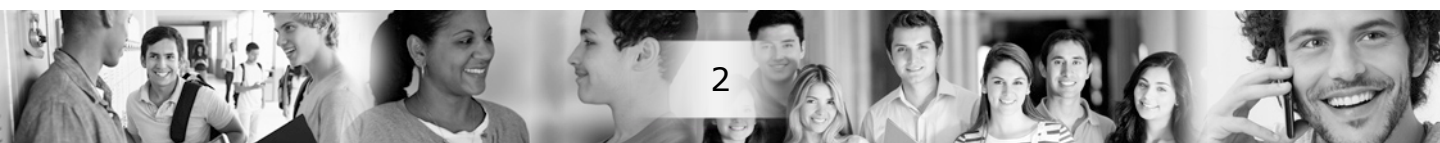

Martin: That's the field level validation. That's going to play an important role in the web page to make sure the users enter the correct character values in a determined data field; that way, we can be sure there won't be human errors in our databases.

Similarly, I'm going to set the data saving and search criteria validation processes so that people can save their data and query results in case they want to change or close the page.

Mary: Those two sound important. But, what about that one?

Martin: Ah, this is the range validation process. It is going to determine a specific range so that people do not enter data out of the parameters, such as future dates or invalid numbers. In my humble opinion, those five are the most important data validation processes.

Mary: Ok, Let me know when you finish so that I can tell the manager to come and check.

Let's Practice!

Each Type for a Specific Purpose!

Instructions: Match the two parts of each sentence.

COLUMN A

1. The form level validation process is going to set some fields as mandatory to...
2. The field level validation process is going to set some field restrictions...
3. The data saving validation process is going to allow users to ...
4. The range validation process is going to establish range parameters...

COLUMN B

- a. save their progress before closing or changing the page.
- b. ensure the users mark all checkboxes correctly.
- c. to avoid people entering information out of that range.
- d. so that users do not enter different characters to the data field.

Let's Practice!

There is a Type of validation for each situation!

Instructions: Organize the mystery sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. the / correctly. / to / to / some / This / checkboxes / mandatory / is / mark / all / users / set / fields / ensure / process / going / as

2. data / it / the / validation; / level / That's / the / users / field. / sure / enter / makes / in / values / correct / a / field / character / the

3. specific / a / range / it / that / people / range. / enter / data / This / validation / is / lets / within / process; / the / is

4. some / processes / forms. / important / for / of / validation / the / are / most / Those / web

Extension Activity

Now's your turn to show how much you know

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about data validation processes.
- BImagine a situation where you can use them to provide data security in a database.
- Spot at least 5 data validation processes that you may use.
- Write a paragraph explaining why you chose those 5 validation processes using the grammar of the lesson.
- Show your findings to your classmates.

Self-Assessment

Yes

No

- I look for extra information about specific topics.
- I set a possible situation where I can use data validation processes.
- I identify important ideas.
- I write a paragraph using the grammar of the lesson.
- I share my findings with my partners.

Target Words

- **mandatory** (adjective): something required or obligatory
e.g. This process is going to set some fields as mandatory to ensure the users mark all the checkboxes correctly.
- **checkbox** (noun): a blank space to tick or mark in a form
e.g. This process is going to set some fields as mandatory to ensure the users mark all the checkboxes correctly.
- **search criteria** (noun): information a person considers relevant when looking for specific information on the web
e.g. I'm going to set the data saving and search criteria validation processes so that people can save their data and query results in case they want to leave or close the page.
- **set** (verb): to establish something
e.g. we need to set some data validation rules so that people do not enter the wrong information in the fields.
- **gather** (verb): to collect something, specially information
e.g. Ensure the information we gather from users is clean.
- **query results** (noun): the results of a specific search or query on the web
e.g. I'm going to set the data saving and search criteria validation processes so that people can save their data and query results in case they want to leave or close the page.

Learning Points

Demonstrative Pronouns Review

The demonstrative pronouns are ***This, That, These, and Those.***

You can use **this** or **these** when you want to emphasize that something is near. Use **this** for singular nouns and **these** for plural nouns.

Examples:

This is a mandatory field. (singular)

These are the parameters you have to validate. (plural)

You can use **that** or **those** to show that something is far. Use **that** for singular nouns and **those** for plural nouns.

Examples:

That is the data validation process you have to perform. (singular)

Those are the most common errors that users make. (plural)

See chart

	Near	Far
Singular	This	That
Plural	These	Those

Examples

- *This is the form level validation.*
- *That's the field level validation.*
- *That's going to play an important role in the webpage.*

Infinitives of Purpose in Sentences with Be Going to

Use the **infinitive of purpose** to express the reason why you are doing something.

Use **be going to** so as to refer to future plans that were planned prior speaking. You can also use the **infinitive of purpose** in order to show the reason why you are going to perform such action in the future.

Some basic rules you must take into account when using the infinitive of purpose may include the following:

Learning Points

The infinitive of purpose **shows the reason why** the subject of the sentence does what he/she does; therefore, if the subject is different from the one showing the purpose, you use "**so that**."

Compare:

*John is **going to add** some validity rules to the online forms **to** help users avoid making mistakes.* (John will do, John will help).

*John is **going to add** some validity rules to the online forms **so that** users avoid making mistakes.* (John will do, someone else will avoid).

In more formal contexts or when you are using stative verbs (be, know, look, etc.), use **in order to** or **so as to** instead of **to**.

***In order to know** what kind of validity rules **you are going to** use, you need to know what the forms are for.*

*John **is going to set** some validity rules to the forms **so as to be** sure the forms are going to work well and users won't make any mistakes.*

Remember that the negative form will always be **in order NOT to...**

compare:

*John **is going to** set some security rules **in order not to** allow users access information they should not get.*

*John **is not going to** remove the validity rules of the form **in order not to** make things harder than they are.*

Examples

- *That's going to play an important role in the webpage to make sure the users enter the correct character values in a determined data field.*
- *I'm going to set the data saving and search criteria validation processes so that people can save their data and query results.*
